

IN THE ABSTRACT:

Please amend the Abstract of the Disclosure as follows:

--~~The present invention has as its object to prevent faulty fixing after rising,~~
~~and in order to achieve this object, a~~ A fixing apparatus for fixing a toner image on a recording material by heat has a pair of rotary members having a heat generating member, and rotatable in contact with each other, electric power supply ~~control means~~ controller for controlling electric power supply to the heat generating member so that the temperature of at least one of the rotary members may become a set temperature, and rotation time setting unit means for setting a time for which the electric power supply control is effected after the shift from a warming-up operation to a fixing capable state and the pair of rotary members are rotated continuously ~~continuedly~~ from rotation during the warming-up operation, on the basis of the time of the warming-up operation.--
